Vision Statement

My doctoral research advanced the robustness, interpretability, and efficiency of neural topic models by improving representation learning, mitigating posterior collapse, and applying knowledge distillation. Building on this foundation, my current agenda focuses on the mechanistic interpretability of LLMs—uncovering how internal computations give rise to behavior—as a means to make them more tractable and resource-efficient.

Short Bio

I am a Ph.D. candidate at the School of Mathematical & Computational Sciences (SMCS), IACS, specializing in topic modeling for NLP. My research focuses on enhancing the quality of topic representations, improving interpretability, and increasing the efficiency of topic models, with publications in venues such as ACL 2025, NAACL 2024, EACL 2023, ECIR 2023, and IEEE Transactions on Artificial Intelligence. I have submitted my doctoral thesis for review (September 2025) and am seeking a full-time research position.

Teaching Assistant

Introduction to Machine Learning [PHD 226/ COM 4203], IACS January - June, 2024

- > Assisted a graduate-level course with approximately **20 students**.
- > **Responsibilities:** Designed and graded all programming assignments, and conducted dedicated doubt-clearing sessions to resolve student queries.
- > **Topics Covered:** Assignments spanned key ML concepts, including Linear Regression, Decision Trees, SVM, k-NN, the EM Algorithm, and Neural Networks.

Laboratory - Numerical Methods (PHS 4211), IACS January - June, 2021

- > Managed lab sessions for a cohort of **20+ master's students**.
- > **Responsibilities:** Designed and graded weekly lab assignments in Python. Conducted tutorials and dedicated doubt-clearing sessions to support students with implementation.
